

Transferring our Knowledge to you

"This was a challenging assignment conducted at a very important time for our organisation. Frontline provided the quality of project level analysis combined with the important learning perspective to deliver a first class piece of work. The final report was presented at a learning conference and the findings shared with other development agencies in the UK. Within SE, the recommendations have been taken forward in a number of practical ways, including a series of core competencies sessions with strategy staff, and the Frontline approach has given staff a new appreciation of the importance of learning in all evaluation activities."

Neil MacCallum, Head of Evaluation
Scottish Enterprise

"I was responsible for a university research group whose members developed the idea of a nail, for mending broken bones, that could easily be removed. There was considerable support for developing this idea by university administrative staff responsible for research and innovation. However, they lacked the expertise on how best to proceed. Frontline was brought in, at a late stage, to provide advice. I learnt, from them, how to assess the market for a potential product and the importance of dropping it as soon as it became apparent that it would not be a commercial success. These lessons have been of considerable subsequent benefit to me in commercialisation of research and in developing courses for students."

David W.L. Hukins, Professor of Bio-medical Engineering
University of Birmingham

UNIVERSITY OF
BIRMINGHAM

"In our experience, Frontline has always been extremely professional and well prepared with well considered options to meet the needs of the organisation rather than "off-the-shelf" solutions, with excellent personnel and performance. Frontline is particularly good at skills transfer which enabled us to reduce dependence on external support."

Maidie Cahill, Director of HR and OD
